

# Powering Connections between Fleets, Manufacturers and Repairers

## Introducing Athoris

### The OEC electronic quote authorisation & invoice management system

Streamlined and digital, Athoris connects leasing or fleet companies to authorised repairers for an efficient quotation and authorisation process, minimising effort and maximising efficiency.

Athoris enables authorised repairers to electronically submit service, maintenance, or repair (SMR) quotations for fleet vehicles.

Content is validated using the leasing company's terms & conditions and checked directly against manufacturer source data for ultimate validation.

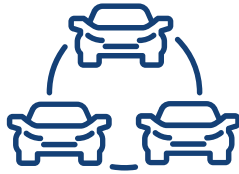

Using the manufacturer source data intelligently, Athoris provides higher automatic authorisation approval rates than other platforms, while also integrating into your system to become the automatic choice.

Plus, Athoris goes beyond electronic authorisation, supporting fully validated and reconciled electronic invoices that are submitted directly to the leasing company's accounting system to reduce admin work and create a faster route to payment.

Athoris is the only commercially available, multi-brand authorisation platform accredited by vehicle manufacturers.

**Athoris** keeps everyone in the loop – seamlessly & electronically.

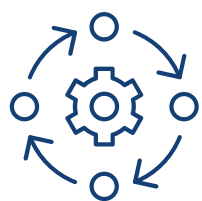

### **Benefits for Fleet Managers:**

- Imports existing fleet vehicles databases
- Maintains accurate vehicle history, including service, repair, actions, & warranty
- Reduces manual admin work, applying contracts & automatic authorisation profiles
- Offers comprehensive business reporting tools
- Sends independently created, pre-reconciled electronic invoices to accounting systems
- Produces substantially higher automated approval rates

### **Benefits for Repairers:**

- Saves time with seamless integration
- Uses directly sourced manufacturer data to ensure accurate quotations
- Improves authorisation rates and checks vehicle terms & conditions prior to quote submission
- Enhances billing process for faster time to payment with electronic invoicing
- Boosts workshop throughput, increasing serve efficiency
- Available at lower cost than manually processed fleet authorisations

### **For Everyone Else in the Loop**

- Substantial administrative cost savings
- No long-term contract or subscription
- Simple, pay-per transaction model

## **The Athoris Advantage**

### **Manufacturer Supported**

The only platform with accreditation from major vehicle manufacturers.

### **Integrated Technology**

Fully integrated data transfer process interacts with leasing companies and dealer systems.

### **Automatic Authorisation**

A web-based platform that provides an easy way to communicate and authorise complex SMR quotes.

### **Manufacturer Source Data**

Fully integrated data directly from the manufacturers, providing parts, labour, and vehicle applicability validation. Data is always up to date and synchronised.

### **Electronic Invoicing Support**

Electronic invoice creation and validation supplied directly to leasing company accounting systems.

## A Suite of Tools

### Vehicle History Check

Build a complete vehicle history to increase automatically approved quotations based on previous work, including tyres and uploaded work conducted outside Athoris.

### Real-Time Communication

Fully logged text-based communications stored against every work order, allowing for quick question resolution.

### Complete Auditing

Fully auditable processes with detailed work history orders logged from point of creation through invoicing.

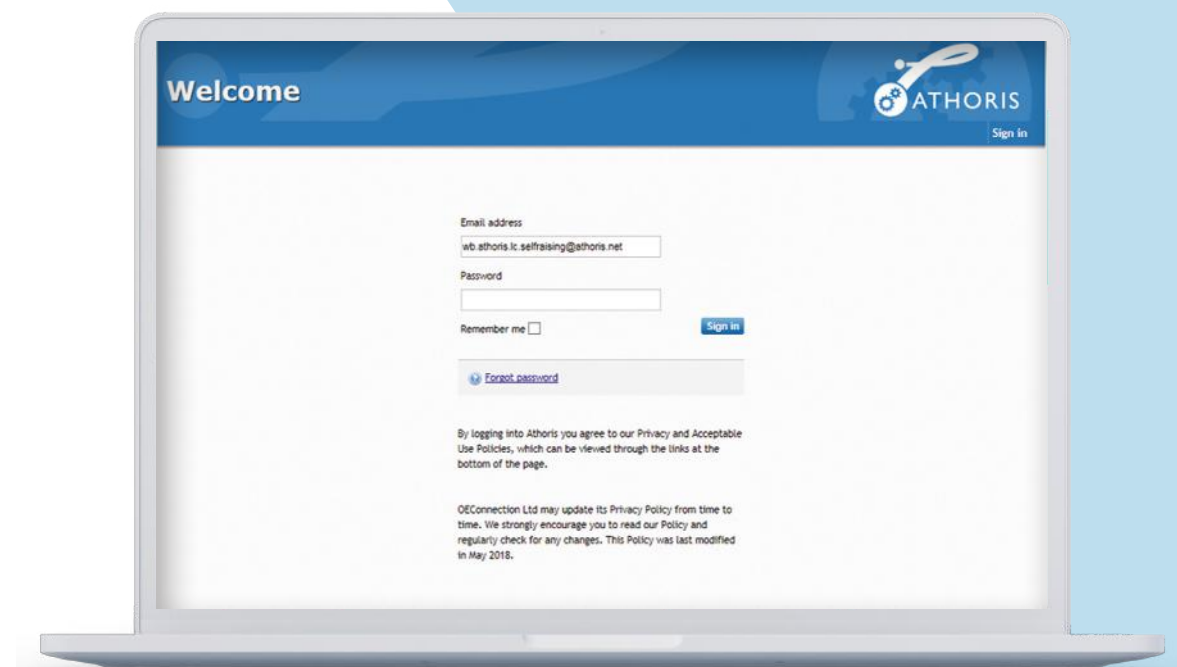

### Full Reporting Suite

A full range of reporting tools available to extract information in presentation-ready format or data can be imported into your management reporting system. Plus, data extracts can be scheduled to run autonomously.

## A User-Friendly & Intuitive Platform

Easy to learn and use, Athoris features an intuitive interface that guides users throughout the process, immediately saving time & money.

- Reliable platform designed to reduce manual errors
- Online support in local languages for faster learning
- Customisable train-the-trainer & group sessions available (on or offsite)
- New feature development & platform improvement through user feedback, minimising IT costs
